

HIDDEN FIGURES IN ISRAEL

Following UN Recommendations
for a Gender-Sensitive Approach to the Corona Crisis

Status Report #2, October 2020

The UN cited several areas in which public policy requires gender-sensitivity if it is to cope adequately with the corona crisis. Here's how they pertain to Israel:

1
Violence
against Women

2
Employment

3
Care for Home
and Family

4
Poverty and
Housing

5
Lone Mothers

6
Older Women

7
Medical
Professions

8
Health insurance
and health services

9
Education

10
Pregnancy and
birth services

+1
Only 10 subjects
pertain to the UN
And we add:
Decision-making
Power

1 Violence against Women

Women are subject to physical, economic and sexual violence within the family.

- In May-July 2020, 4,700 police files were opened in Israel on family violence cases, compared with 4,050 during the same period in 2019;
- Between March and August 2020, 14 Israeli women were murdered by their spouses or other family members.

In May-July 2020

4,700

police files were
opened in Israel on
family violence cases

2

Employment

Women are employed in more part-time work and precarious jobs, and earn less than men. These gaps widen during crises.

Vacation without pay

The Government Employment office reports that since the start of Israel's second lockdown (September 19, 2020), 94,000 job seekers re-registered as sent home on vacation without pay, 70% of them women.

Informal economy

Women are over-represented in the informal economy, a category which includes home cleaners, nannies, persons devoid of residency status, refugees and sex workers. They have limited or no access to social insurance, and the economic losses they incur expose them to the dangers of homelessness and hunger.

3

Care for Home and Family

In June 2020, women did 61% of housework in Israeli two-parent families and 64% of childcare work; Men failed to increase their share of these tasks.

Women did
61%
of housework

Women did
64%
of childcare work

4

Poverty and Housing

Poor women are in greater risk than others in times of crisis:

Women constitute

54%

of poor people
in Israel

Women constitute

62.5%

of Israelis receiving
rent subsidies

Lone mothers are

47%

of Israelis residing in
public housing

5

Lone Mothers

Lone mothers are especially vulnerable to poverty:

Among one-parent families in Israel (84% of which were headed by women in 2018), 26% were poor prior to the corona crisis; 30% are now poor.

6

Older Women

- Some 1/3 of women aged 65 and over live alone, compared with 12% of men
- Public policy needs to make special provisions for women living alone, locked down in their homes as they are during the corona crisis

7

Medical Professions

Women constitute 72% of health care workers and the majority of essential workers. They are in more danger than others of contracting Covid-19 due to exposure to people infected with the virus.

 Women  Men

Occupational therapists

96%

Social workers

90%

Nurses

89%

Physiotherapists

75%

Physicians

43%

8

Health insurance and health services

While Israel boasts a National Health Insurance Law that covers all residents, **some persons have limited or no access to medications and medical treatment**, among them persons lacking residency status and migrant workers.

9

Education

When school schedules are disrupted, mostly women forego or reduce paid work to care for children and assist them with long-distance learning

10

Pregnancy and birth services

During health crises, the corona epidemic being a prime example, these women-centered services are reduced due to limited health care resources.

Decision-making Power

+1

To all of the above, we add that women's influence in decision-making positions in Israel continues to be limited:

Women are no more than

- 21% of Cabinet ministers
- 27.5% of legislators
- 17% of hospital directors-general
- 20% of the national team on the corona crisis, increased to 61% after women's protest and court petition!

This needs to change!

Israel needs more women's input to cope with the corona crisis.
